**DETAILED ACTION**

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372. This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- Invention 1    Claim(s) 1, 8, drawn to a method for determining whether an activity of an enzyme selected from the group consisting of a sphingosine kinase and a phosphatase involved in the sphingolipid pathway is present in a sample or not.
- Invention 2    Claim(s) 2, drawn to a method for identifying an agent that modulates the activity of a sphingosine kinase.
- Invention 3    Claim(s) 3, drawn to a method for identifying an agent that modulates the activity of a phosphatase involved in the sphingolipid pathway.
- Invention 4    Claim(s) 4, drawn to a method for determining whether in a sample sphingosine kinase-1-activity, sphingosine kinase-2-activity, or both, or no sphingosine kinase activity is present.
- Invention 5    Claim(s) 5, drawn to a method for differentiating whether a test compound is capable to mediate the activity of a sphingosine kinase-1 and/or a sphingosine kinase-2.
- Invention 6    Claim(s) 6, 7, drawn to a kit for determining the activity of an enzyme selected the group consisting of a sphingosine kinase and a phosphatase.

Invention 7 Claim(s) 9, drawn to a compound.

Invention 8 Claim(s) 10, drawn to the use of fluorescent labeled sphingosine of formula I.

Invention 9 Claim(s) 11, drawn to an agent which is capable to mediate an enzyme selected from the group consisting of sphingosine kinase and a phosphatase involved in the sphingolipid pathway.

The inventions listed as Inventions 1-9 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

A same or corresponding technical feature shared among Inventions 1-9 is an agent that which is capable to mediate an enzyme selected from the group consisting of sphingosine kinase and a phosphatase involved in the sphingolipid pathway. However, Hakogi et al. (JP 2003 261794, issued 09/19/03; IDS filed 03/28/2006) teaches such sphingosine analogue agent. Furthermore, the references of Caligan et al. (Analytical Biochemistry, vol. 281, no. 1, pp.36-44 (2000); IDS filed 03/28/2006), and Spiegel et al. (WO 99/61581, issued 12/02/1999; IDS filed 03/28/2006) teach the methods of claims 1-4, 8, 9, and 13.

Thus, the same or corresponding technical feature is not special since it was known in the prior art and therefore cannot make a contribution over the prior art. Since the inventions lack the same or corresponding special technical feature, then the inventions listed as Inventions 1-9 are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
